

## Vyve Broadband Selects Harmonic for Network Modernization

March 3, 2026

### ***Harmonic's cOS Virtualized Broadband Platform Simplifies Network Operations, Lowers Hardware Dependency and Enables Seamless DOCSIS and Fiber Growth***

SAN JOSE, Calif., March 3, 2026 /PRNewswire/ -- Harmonic (NASDAQ: HLIT) today announced that Vyve Broadband — a leading provider of high-speed internet, TV and phone services across 16 states in the United States — is modernizing its network infrastructure by adopting the company's market-leading cOS™ virtualized broadband platform. By moving to a virtualized, cloud-native broadband platform, Vyve is simplifying operations, scaling capacity and advancing its network evolution strategy to deliver reliable, high-speed internet connectivity.

"At Vyve Broadband, we're redefining connectivity with next-generation, future-ready technology that bridges the digital divide," said Andy Parrott, CEO at Vyve Broadband. "Harmonic's cOS virtualized broadband platform provides a modern, software-driven architecture that converges DOCSIS and fiber operations onto a single, unified platform. It delivers the scalability and agility we need to provide multi-gigabit broadband services while continuously elevating service performance across our markets."

Vyve's strategic transition to Harmonic's vCMTS platform deployed in a distributed access architecture creates a more flexible and scalable operating model for the service provider. By virtualizing its broadband infrastructure, Vyve can streamline operations, efficiently scale capacity and accelerate network upgrades while reducing reliance on hardware. Harmonic's cOS platform provisions for seamless coexistence of DOCSIS and fiber, strengthening Vyve's ability to evolve to DOCSIS 4.0 over time while expanding fiber broadband service across its PON footprint.

"Our partnership with Harmonic is foundational to Vyve's long-term network strategy. The cOS platform gives us the architectural flexibility to accelerate our transition to distributed access architectures, charting a clear path to DOCSIS 4.0 and fiber convergence," said Guy McCormick, Senior Vice President of Engineering at Vyve Broadband. "This collaboration ensures that Vyve's broadband infrastructure is built not just for today's demands, but for the future."

A key component of Vyve's network modernization is the use of Harmonic's AI-powered Central system featuring advanced analytics, real-time insights and intuitive dashboards to proactively manage network performance. These capabilities will allow Vyve to identify and resolve issues before they impact subscribers, significantly reducing service disruptions and elevating the customer experience.

"Vyve Broadband is setting a powerful example for operators nationwide with its forward-thinking software-driven approach to modernizing network infrastructure," said Jeffrey Glahn, Senior Vice President, Global Sales at Harmonic. "As more broadband service providers scale to meet rising bandwidth demand, Harmonic's cOS platform provides a unified architecture that drives operational efficiency and long-term network evolution."

Harmonic is the market share leader in cable broadband equipment, virtual CMTS and DAA, according to Dell'Oro Group, the trusted source for market information about the telecommunications, networks and data center IT industries. The company's market-leading cOS platform powers next-gen broadband services through more than 41 million CPE devices worldwide for leading operators in North America, Europe, Latin America and Asia.
